

Stainless Steel Erosion Control Basket 600x600x150mm

SUDS08100

A universal stainless steel mesh SuDS basket designed to be filled with 80-150mm stone that prevents erosion of soil profiles where 600mm wide basket outfalls deliver water down slopes from SuDS features. The shallow basket (150mm deep) is laid dry onto subsoil with a geotextile surround to each basket to prevent erosion of soil. The surface face is left open to allow water to flow in the basket or for vegetation cover.

Each basket is supplied flat with crimp clips (fitted at 200mm centres) and a geotextile liner for the sides, base and (temporarily) lid.

- **Protects soil surfaces from 600mm wide stainless steel mesh basket inlets or kerb inlets**
- **Integrates into surface landscape**
- **Cost effective and minimum maintenance**

* Stone infill sold separately

Typical Application - Erosion Control
