

Attenuation Tank Installation

Surface Water Management

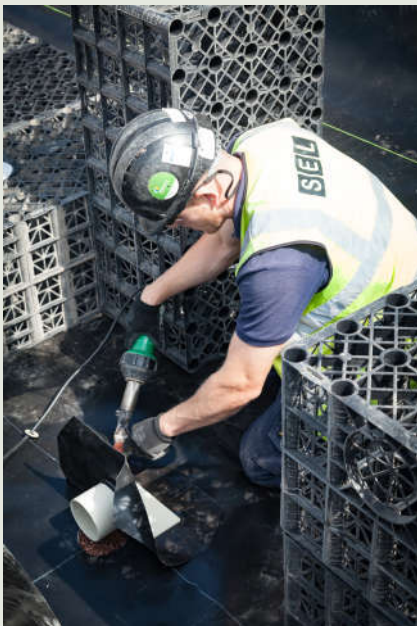

Turnkey Solutions for Surface Water Management

SEL offer the reassurance of a single point of contact to all parties involved in the design, supply, installation of surface water management systems.

All solutions will be SuDS and Building Regulations compliant with supporting calculations and CAD details where required with particular consideration of system performance, constructability and CDM.

SEL can provide advice and guidance on surface water management systems, we can review existing proposals for compliance to current guidance and legislation and whether there may be a more cost-effective solution.

All attenuation systems are encapsulated within a robust fully welded impermeable membrane. All pipe connections are guaranteed watertight due to our bespoke rigid apron tank connections.

These create a watertight opening in the membrane encapsulation. They are hot air welded to the main membrane surround and allow a drainage pipe to be connected using standard drainage fittings.

All SEL site installers hold CSCS cards, with method statements and risk assessments prepared for all site works.

ISO 9001
All installations are undertaken in accordance with our ISO9001 CQA protocol.

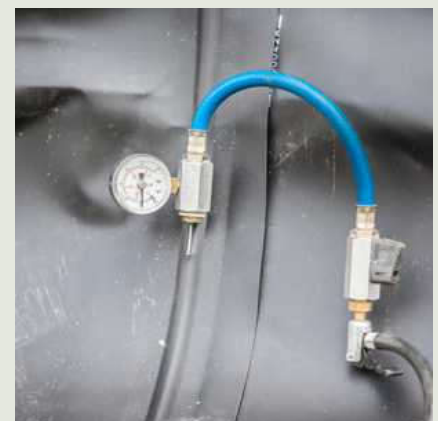

SEL will work with you to ensure that the storm water attenuation solution is a perfect fit for your development. The attenuation system is delivered direct to site before being installed by our fully insured, qualified and expert technicians.

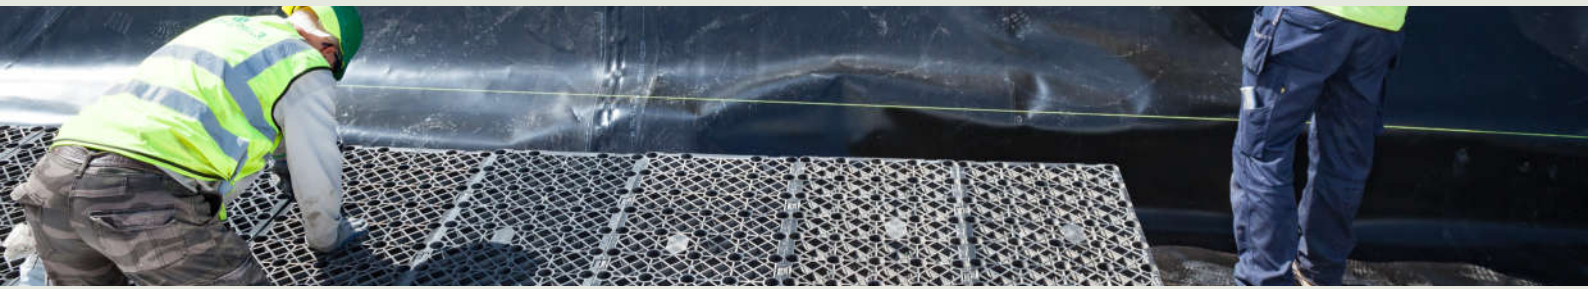

Supply & Install Benefits:

- * No on-site welding
- * Cut down on-site waste
- * More cost and time effective
- * Simple inspection and maintenance

Membrane seams are pressure tested to watertightness integrity and witnessed by a designated site personell and all quality assurance documents are signed.

SEL have good close working relationships with many of the recognised key suppliers in the surface water attenuation market. These relationships offer an unrivalled expertise to ensure correct product specification, application and installation.

With over 20 years of experience of installing attenuation systems, SEL have the knowledge and experience to deliver a quality assured, trouble free installation.
